

GLASS AND MIRRORS

COLORED GLASS

COLORED GLASS is a rear lacquered glass according to the RAL single color spectrum. In the "ON" position, the COLORED GLASS allows to display almost 100% of the monitor system's brightness, permitting best picture quality with brilliant colors to transmit. When in the "OFF" position, the **ad notam** monitor system appears in the glass as a black area.

The COLORED GLASS is designed for combination with the **ad notam** monitor systems and fulfills the necessary surface, hardness, and tension qualities.

The position of the image area within the glass surface is freely selectable. The flexibility is only limited by the outline dimensions of the **ad notam** monitor system which need to be considered when installing the monitor system on the backside of the glass.

Please use the **ad notam** glass orderform as appendix to your purchase order to supply data and to indicate the desired RAL color code.

ad notam recommends to use the „Optiwhite“ type when lacquering with a light color is desired as due to the nature of the glass a slight derivation from the RAL color can occur when using standard „Float“ glass.

COLORED GLASS with „Antireflect“ type is anti-glared on both sides and therefore allows less than 1% reflexion at all. **ad notam** recommends to use the „Antireflect“ type in environments with much influence of light.

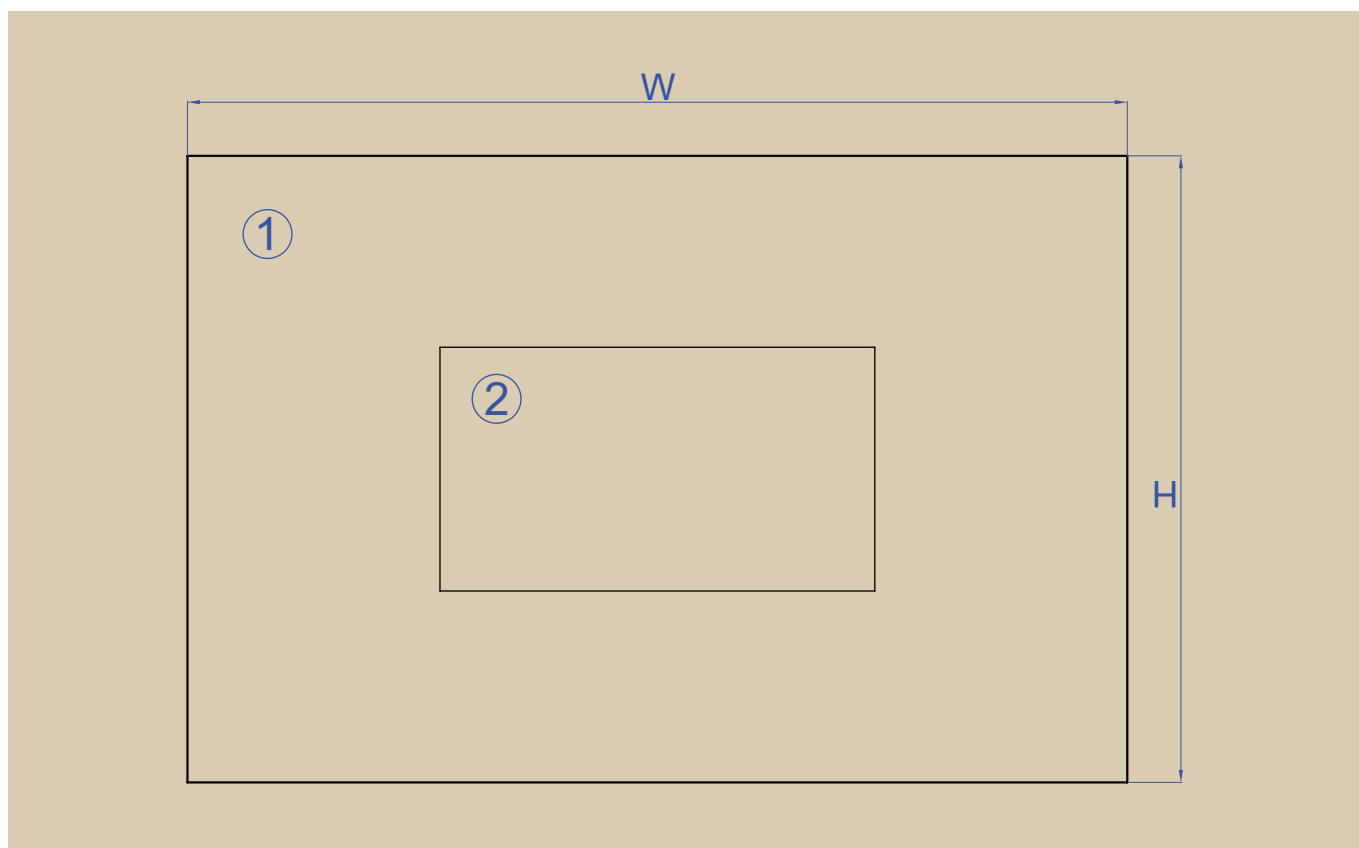

ARTICLE NO.

COLORED GLASS		Code	Type	Code	Thickness	Type
FG-	[]	SM-	Float	005 R	5mm	Standard
		OP-	Optiwhite	007 R LSG	6.38mm	Laminated Safety Glass
		Code	Type	Code	Thickness	
		AF-	Antireflect	006 R	6mm	

GLASS AND MIRRORS

COLORED GLASS

① COLORED GLASS Max. dimensions:

Thickness in mm	max. W in mm	max. H in mm	Weight per m ²
5	3150	2000	12.5 kg
6	3005	1900	15.0 kg
6.38	3150	2000	15.95 kg

② IMAGE AREA Combinable monitor system sizes:

Image Area	min.	max.
Size (inch)	13.3"	82.0"

Tolerances	Application Characteristics	Optical Characteristics
<p>If the difference between ordered dimensions and actual received product is exceeding 2mm in measurements of H & W, the material is defective. In this case the glass may be exchanged.</p>	<p>a) The specified glass is suitable in moist areas but for indoor use only!</p> <p>b) The standard implementation is not usable in public facilities or at public places. Applications in these surroundings have to be implemented with laminated safety glass (LSG). Please consider this with your order or planning.</p> <p>c) Installation & mounting guidelines for glass have to be considered!</p> <p>On demand authorized retailers can be supported with training records!</p>	<p>a) ad notam recommends to use the „Optiwhite“ type when lacquering with a light color is desired as due to the nature of the glass a slight derivation from the RAL color can occur when using standard „Float“ glass.</p> <p>b) ad notam recommends to use the „Antireflect“ type in environments with much influence of light.</p>
<p>Cleaning Note</p>		
<p>a) Do not use any rubbing or caustic cleanse!</p> <p>b) Use only a clean and dust-free cloth, by using a customary glass detergent!</p> <p>c) Consider the material specification!</p>
